

Thank You for Choosing

Wine Sentry

Designed by wine collectors, for wine collectors who value confidence in their cellar.

GETTING STARTED IS SIMPLE. YOUR SYSTEM INCLUDES TWO COMPONENTS:

Wine Sentry **Sensor**

Wine Sentry **Display**

Both components require a USB-C power supply. Power supplies and cables are not included, because every cellar is different and cable length needs vary depending on where you place your Sensor and Display. Please be sure your wall charger outputs 5Vs as we have recently found that not all do so (but most do).

OPEN AND UNBOX YOUR *Wine Sentry* PRODUCT

Carefully unbox the *Wine Sentry* Sensor and Display and place both inside your wine cellar.

- Sensor: place it where it can monitor the cellar environment under your preferred storage conditions. It may also be used to display a favorite bottle (empty or full) or other items.
- Display: place it where it is easy to see. It can sit flat or tipped upright, depending on your cellar layout. The display contains the motion sensor on the front of the device. Point it in a direction that will not create unwanted motion alerts, away from places where normal activity occurs.

Once positioned:

- ① Plug in the WineSentry Display first.
- ② Then plug in the WineSentry Sensor.
- ③ Allow both devices about 60 seconds to power up and connect to each other. Each will display a GREEN LED when we are ready to continue. The sensor LED is under the neoprene matt on the top. The display is under the tilt-up display.

DOWNLOAD AND REGISTER THE LUXSENSE APP

Scan a QR code below to download the app, or click on this link: gr.link/6let81

Once installed, open the app and:

- ① Accept all requested permissions. THIS IS IMPORTANT
- ② Enter your Registration ID, provided by email.
- ③ You will then be taken to the LuxSense App main menu.

PAIR *WineSentry* TO YOUR WIFI

In the LuxSense app:

- ① Go to the Settings menu.
- ② Follow the in-app instructions to pair your WineSentry Sensor.
- ③ New sensors will appear as UNASSIGNED until setup is complete.
- ④ You will need your WiFi network name and password, plus a name for your sensor, to finish setup.
- ⑤ Click the SAVE button and monitor the messages as our app returns you to the main menu.
- ⑥ Done! At this point the sensor will restart itself and begin the acclimation process. (see below)
- ⑦ *WineSentry* will begin to send update messages to the display almost immediately. However, it will not update the display with current conditions until the top of the hour. Please be patient.

INITIAL CALIBRATION

To ensure expected performance, you have set up your *WineSentry* monitor in your cellar under your preferred temperature and humidity conditions. *WineSentry* uses the initial cellar environment as its target reference.

◇ LIGHT-LEVEL SETUP

During startup and acclimation, keep your wine cellar lights ON so *WineSentry* can properly establish the expected ON light condition.

🕒 CALIBRATION PERIOD

WineSentry calibrates during the first ~30 minutes. We recommend leaving *WineSentry* undisturbed and keeping the cellar in its normal desired condition.

🔄 RE-CALIBRATION

If there is ever a need to re-calibrate, simply unplug *WineSentry* and plug it back in.

DAILY AND UNSCHEDULED NOTIFICATIONS

🔔 DAILY NOTIFICATIONS

Each day around 12:00 p.m., *WineSentry* sends a notification with the current temperature and humidity deviation readings from your cellar.

⚠️ UNSCHEDULED ALERTS

If readings deviate beyond our tolerances from the target conditions for more than several minutes, *WineSentry* will send an unscheduled alert.

⚡ NOTIFICATION LIMIT

To prevent excessive alerts, *WineSentry* sends a maximum of 5 unscheduled notifications before pausing alerts for 24 hours. During the pause, the display and any phone widgets keep updating.

PHONE SCREEN WIDGETS

After WineSentry is properly acclimated, you can add our phone screen widget for a quick glance at your cellar conditions.

🏠 ANDROID PHONES

- ① Long press the background of any screen until a popup menu appears.
- ② Select Widgets.
- ③ Find and select the LuxSense widget.
- ④ Drag and drop it to your preferred location.

● iOS PHONES

- ① Long press the background of any screen until the Edit menu appears in the upper-left corner.
- ② Select Edit.

- ③ Select Add Widget.
- ④ Locate the LuxSense widget.
- ⑤ Touch Add Widget.
